County Employment and Wages in Minnesota — Third Quarter 2014

Seven of the eight large counties in Minnesota reported employment increases from September 2013 to September 2014, the U.S. Bureau of Labor Statistics reported today. (Large counties are defined as those with employment of 75,000 or more as measured by 2013 annual average employment.) Anoka County had the largest increase, up 1.9 percent followed by Hennepin, up 1.5 percent. Employment in Dakota County rose 1.3 percent. Regional Commissioner Charlene Peiffer noted that these same three large counties experienced over-the-year rates of employment growth below the 2.0 percent national increase. (See [table 1.](#))

Among the eight largest counties in Minnesota, employment was highest in Hennepin (872,800) in September 2014, followed by Ramsey (326,100). Two other counties—Dakota and Anoka—had employment levels of more than 100,000. Collectively, Minnesota's eight large counties accounted for 67.0 percent of total employment within the state. Nationwide, the 339 largest counties made up 71.8 percent of total U.S. employment.

The average weekly wage in Olmsted County rose 11.1 percent from the third quarter of 2013 to the third quarter of 2014, the largest increase among Minnesota's large counties. Hennepin County had the highest average weekly wage in the state at \$1,175, followed by Olmsted (\$1,077) and Ramsey (\$1,057). (See [table 1.](#)) Nationally, the average weekly wage rose 2.9 percent over the year to \$949 in the third quarter of 2014.

Employment and wage levels (but not over-the-year changes) are also available for the 79 counties in Minnesota with employment below 75,000. Of these 79, only Faribault County (\$1,037) and Le Sueur County (\$1,008) had average weekly wages above the national average. (See [table 2.](#))

Large county wage changes

Five of the 8 large counties in Minnesota recorded wage increases greater than the national increase of 2.9 percent from the third quarter of 2013 to the third quarter of 2014. (See [table 1.](#)) As noted, Olmsted County experienced the state's largest average weekly wage increase, up 11.1 percent. This was followed by Stearns (5.7 percent) and St. Louis (4.2 percent). Hennepin and Washington had the smallest wage increases among Minnesota's large counties, up 1.1 percent and 2.6 percent respectively.

Among the 339 largest U.S. counties, 328 had over-the-year increases in average weekly wages. Olmsted, Minn., had the largest increase with a gain of 11.1 percent. San Francisco, Calif., was second with wage growth of 8.7 percent, followed by Santa Clara, Calif., (7.4 percent). Wage decreases were recorded in 10 large counties nationwide; Collier, Fla., experienced the largest over-the-year wage loss at 3.9 percent.

Large county average weekly wages

Average weekly wages in three of Minnesota's eight large counties were above the national average of \$949 in the third quarter of 2014. As noted, Hennepin County (\$1,175) had the highest average weekly wage in the state, ranking 27th among the 339 largest U.S. counties, followed by Olmsted (\$1,077) and Ramsey (\$1,057) which placed 46th and 54th respectively. Washington (\$783) reported the lowest average weekly wage among the state's largest counties and ranked 267th nationwide.

Nationally, Santa Clara, Calif., held the top position among the highest-paid large counties with an average weekly wage of \$2,012. San Mateo, Calif., was second at \$1,824, followed by New York, N.Y. (\$1,733), San Francisco, Calif. (\$1,685) and Washington, D.C. (\$1,631).

Average weekly wages in Minnesota's smaller counties

Among the 79 smaller counties in the state (those with employment below 75,000), Faribault County had the highest average weekly wage at \$1,037 followed by Le Sueur County (\$1,008). These two counties were the only smaller counties to have wages greater than the \$949 national average. Cass County had the lowest weekly wage among the smaller counties at \$521. (See [table 2.](#))

When all 87 counties in Minnesota were considered, all but 5 had wages below the national average of \$949. Eleven reported average weekly wages under \$600, 36 had wages from \$600 to \$699, 28 reported wages from \$700 to \$799, 4 reported wages from \$800 to \$899, and 8 had wages of \$900 or more. (See [chart 1.](#))

Additional statistics and other information

QCEW data for states have been included in this release in table 3. For additional information about quarterly employment and wages data, please read the Technical Note or visit www.bls.gov/cew.

Employment and Wages Annual Averages Online features comprehensive information by detailed industry on establishments, employment, and wages for the nation and all states. The 2013 edition of this publication contains selected data produced by Business Employment Dynamics (BED) on job gains and losses, as well as selected data from the first quarter 2014 version of the national news release. Tables and additional content from Employment and Wages Annual Averages 2013 are now available online at www.bls.gov/cew/cewbultn13.htm. The 2014 edition of Employment and Wages Annual Averages Online will be available in September 2015.

The County Employment and Wages release for fourth quarter 2014 is scheduled to be released on Wednesday, June 17, 2015, at 9:00 a.m. (CT).

Technical Note

Average weekly wage data by county are compiled under the Quarterly Census of Employment and Wages (QCEW) program, also known as the ES-202 program. The data are derived from summaries of employment and total pay of workers covered by state and federal unemployment insurance (UI) legislation and provided by State Workforce Agencies (SWAs). The 9.4 million employer reports cover 137.7 million full- and part-time workers. The average weekly wage values are calculated by dividing quarterly total wages by the

average of the three monthly employment levels of those covered by UI programs. The result is then divided by 13, the number of weeks in a quarter. It is to be noted, therefore, that over-the-year wage changes for geographic areas may reflect shifts in the composition of employment by industry, occupation, and such other factors as hours of work. Thus, wages may vary among counties, metropolitan areas, or states for reasons other than changes in the average wage level. Data for all states, Metropolitan Statistical Areas (MSAs), counties, and the nation are available on the BLS Web site at www.bls.gov/cew; however, data in QCEW press releases have been revised and may not match the data contained on the Bureau's Web site.

QCEW data are not designed as a time series. QCEW data are simply the sums of individual establishment records reflecting the number of establishments that exist in a county or industry at a point in time. Establishments can move in or out of a county or industry for a number of reasons—some reflecting economic events, others reflecting administrative changes.

The preliminary QCEW data presented in this release may differ from data released by the individual states as well as from the data presented on the BLS Web site. These potential differences result from the states' continuing receipt, review and editing of UI data over time. On the other hand, differences between data in this release and the data found on the BLS Web site are the result of adjustments made to improve over-the-year comparisons. Specifically, these adjustments account for administrative (noneconomic) changes such as a correction to a previously reported location or industry classification. Adjusting for these administrative changes allows users to more accurately assess changes of an economic nature (such as a firm moving from one county to another or changing its primary economic activity) over a 12-month period. Currently, adjusted data are available only from BLS press releases.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; Federal Relay Service: 1-800-877-8339.
